

## SOSMobile Great New Features!

SOSMobile is constantly evolving based on client feedback and emerging technology. Here are just a few of the exciting new features we offer.

### Map-based Order Creation

Order creation in the field has long been supported by SOSMobile. Now this can be accomplished by simply pointing to the location on the route map in either SOSRemote or SOSRemoteTouch. The address and geo-location fields will be automatically populated in the new order.

### Tighter Integration to GIS

For years SOSMobile users have had the ability to view orders on any mapping application including Esri. Now we can embed your GIS map into the closing Wizard further streamlining your operation.

### Sketchpad

Our built in Sketchpad allows users to draw diagrams or annotate images captured in the field. Images and files are automatically attached to the order and immediately available to the office.

# Did You Know. . . ?

There are so many features in *SOSMobile*, that even our clients may not be aware of them all. Here are a few to consider.

## Change the Close Wizard Button Position.

You can change the default location of the Close Wizard button in *SOSRemote* from the bottom right of the screen to the middle of the page. (Select File -Properties -Preferences.)

## Add Audible Alarms.

Assign different audible alarms to alert field techs when a new order is assigned. Vibration is also an option if your device has that capability.

## Changing Fonts.

Customize the look and size of the characters on the *SOSRemote* screen by changing the default font.

## Barcode Scanning.

Barcode scanning is supported as an input option for fields in both *SOSRemote* and *SOSRemoteTouch* – a great way to ensure data integrity. Ask us about device selection.

## Time Entry.

Not currently tracking time and equipment in the field? This feature is available in the default Closing Wizard and can be turned on through setup. Entered time information can be viewed in reports to facilitate timesheet completion. Or we can export it directly to your payroll system.

<b>Resource</b>	AFOL			
	Hours		Minutes	
<b>Straight Time</b>	1		0	
<b>Time and a Half</b>	0		0	
<b>Double Time</b>	0		0

## About InsightAtlast

*InsightAtlast has helped utilities save money and increase productivity through field force automation since 1999. Our SOSMobile software provides intelligent scheduling, mobile dispatch and real-time updates to and from the field, affordably automating a utility's entire mobile workforce. As integration experts, SOSMobile is designed to capture and update orders and data from multiple sources, including its own database. This gives field personnel access to all needed information, and the office the tools to effectively manage field resources.*

(ORIGINALLY SENT AS CONSTANT CONTACT EMAIL IN AUGUST 2016.)
